

GHALY RIZQI MAULUDIN

Data Engineer

ghalyrizqimauludin@gmail.com | linkedin.com/in/ghalyrizqi | ghaly.vercel.app

PROFILE

Data Engineer with 5 years of experience across the full data engineering lifecycle: **designing data architectures, building scalable pipelines and warehouses, and maintaining and monitoring production systems**. Proven track record of leading platform migrations and major infrastructure upgrades. Experienced in CI/CD with Jenkins and rsync, containerized workloads with Docker and Kubernetes, and data modeling with dbt. Proficient in MySQL, PostgreSQL, ClickHouse, DuckDB, GCP (including: BigQuery, GCS), and AWS (including: Redshift, S3, Lambda, secret manager).

WORK EXPERIENCES

BLUEBIRD GROUP

Data Engineer | Jakarta, Jan 2026 – Present

- Upgraded Apache Airflow from v2.10.4 to v3.1.6 on Kubernetes, migrated the metadata database, and refactored deprecated code across 300+ DAGs.
- Introduced dbt Core on BigQuery, replacing stored procedures with staging and mart models.
- Built a dbt observability layer on Elementary in BigQuery with Grafana dashboards for pipeline health, model run time, and query size monitoring.

Data Engineer | Jakarta, Feb 2025 – Jul 2025

- Replaced individual MySQL, PostgreSQL, and SQL Server connectors in Airflow DAGs with a single Trino connection into BigQuery.

LAUTAN LUAS GROUP

Data Engineer | Jakarta, Oct 2025 – Dec 2025

- Set up Airflow and dbt in Docker, wired Jenkins CI/CD to GitHub webhooks for automated deploys, and built dbt models in BigQuery.

SUPER APPS (YC W18)

Data Engineer | Surabaya, Aug 2022 – Dec 2024

- Moved sister company's data warehouse from Redshift to DuckDB, running on EC2, cutting annual costs by 77% (\$1,700+).
- Moved automation off an on-premise Windows PC (Robointern) onto Apache Airflow, bringing uptime to 99%. Added email alerts and centralized logging to cut down incident response time.
- Led Bitbucket and CI/CD adoption with SRE teams, tightening code security and deployment reliability.
- Built dbt Core on Redshift instead of paying \$1,200/year for dbt Cloud, and sped up Tableau dashboards through optimized data marts.
- Wrote Python scripts for AWS Secrets Manager to replace plaintext credentials with secure storage and retrieval.
- Set up Git, Bitbucket, SSH, and Python environments across team laptops and servers.
- Built ETL pipelines in Python and SQL pulling from CSV, Google Sheets, MongoDB, Redshift, and Oracle NetSuite API. Used AWS Lambda for event-driven steps and internal tools to cut manual work.

ASTRA INTERNATIONAL

Data Engineer | Jakarta, May 2021 – May 2022

- Built data marts in SQL, Scala, and Apache Spark to feed faster business reports.
- Tuned SQL queries in Apache Impala to cut processing time and improve response speed.
- Scheduled ETL pipelines with Cron and Apache Spark, replacing manual runs.

RESEARCH CENTER OF CITRUS AND SUBTROPICAL FRUITS (BSIP Jestro)

Data Analyst | Batu, July 2019 – September 2019

- Built a Self-Organizing Map clustering model to categorize citrus fruit data across 625 datasets.
- Built a forecasting model scoring 25 orange varieties on standardized parameters to identify best hybrid candidates, cutting time for performance measurement.
- Presented findings to management with specific recommendations on variety selection.

PROJECTS

Forecasting New COVID-19 Cases in Indonesia Using Extreme Learning Machine (ELM)

Extracted daily case data from Indonesia's COVID-19 task force API and built an Extreme Learning Machine model to forecast new infections.

ETL/ELT Data Pipeline Development

Migrated data from MySQL, PostgreSQL, APIs, and CSV files into a unified warehouse using Airflow for orchestration and Docker for containerization.

Web Scraping Projects

Built scrapers for Zataru (perfume data), Transfermarkt (football player stats), and Sofascore (football stats). Processed and structured data for downstream analysis.

EDUCATION

University of Brawijaya | Malang, 2016 – 2021

Bachelor of Informatics Engineering

VOLUNTEER

PARTNATECH – Data Engineer Mentor | Apr 2024 – May 2024

Mentored 6 students in the Analytics Engineer stream. Covered pipeline design, ETL, SQL, Python, and GCP through code reviews and hands-on sessions.

SKILLS

- **Programming Languages:** Python, SQL, Scala, R, Bash.
- **Databases:** Redshift, MySQL, PostgreSQL, BigQuery, MongoDB, clickhouse, duckdb, supabase.
- **Tools:** Apache Airflow, Apache Spark, Apache Impala, dbt, Docker, Kubernetes, Bruin, dlt, Airbyte, Jenkins, AWS Lambda, S3, Cron, Git, AWS Secrets Manager, Linux.
- **Certifications:** Learn DevOps Basics – Dicoding, Data Warehouse for Database Architect (Data Engineer).
